2007 Chrysler PT Cruiser: Engineering

August 31, 2006, Auburn Hills, Mich. - **ENGINEERING**

“Others may try to imitate, but there is still nothing on the road that matches Chrysler PT Cruiser’s style, performance or interior flexibility,” said Larry Lyons, Vice President — Front-wheel-drive Product Team. “With three engine options, including two available turbo engines, a smooth, quiet ride and comfortable and flexible interior, PT Cruiser leads the pack. And 1 million sales prove it.”

High-quality, performance and functionality give Chrysler PT Cruiser a huge leg up on the competition. The Chrysler PT Cruiser offers drivers performance, both under the hood, behind the wheel and under the seats. This one-of-a-kind vehicle is available with three engine options, including two turbo engines (180 hp and 230 hp) that blow away the competition.

Reduced road, wind and powertrain noise result in an exceptional, quiet ride inside the Chrysler PT Cruiser’s cabin. An acoustic package (which includes sealants around the doors, windows, rear floor pan and reverberant cavity area), combined with sound absorption in the trim panels, reduces road noise. Sealing around the heating, ventilation and air conditioning (HVAC) system and insulation in the dashboard reduce powertrain noise. The inner belt seals in the door and added foam in the A-pillar reduce wind noise.

The Chrysler PT Cruiser’s flexible interior can be configured in 160 different ways, giving owners the opportunity to tackle a multitude of tasks with their vehicle. Innovative new feature options, including Yes Essentials® seat fabric, a standard console flood lamp, a standard soft-touch electric liftgate and remote keyless entry make PT Cruiser even more functional for 2007.
